IDS 400 Series Indicators PC Based Programming and Configuration Software

Dealers who possess basic programming skills can add value and profit to the standard product. We know of no other Digital Indicators that are fully programmable in an easy and flexible macro language like our Scale Basic.

Scale Basic allows you to customize the operation of the IDS 400 series of Digital Indicators to meet your application requirements.

The scale Basic language provides various commands and functions that include: Math operations, I/O control, analog output, setpoints, timers, data entry, ID storage, message display and program sequence control among others.

Coming soon Free Scale Basic programs!

Download programs from our Scale Basic library and modify the programs to suit your application.

Step by step tutorials

Step by step tutorials with real EZ Link window snap shots. We will walk you through the complete process of writing a simple Scale Basic program in EZ Link that you may use.
